During most of the day the sun's irradiance will be less. In those instances what hits a panel's surface will be measured as a fraction of a peak sun hour. So, if the sun were shining at half of its potential intensity between five and six o'clock in the evening, that would be calculated as 0.5 peak sun hours of exposure for each solar panel in a rooftop array.

Batteries store excess energy generated during the day for use at night or during cloudy periods. For a 10kW solar system, calculate your daily energy consumption to determine battery needs. If your household uses 30 kWh daily and each battery holds 10 kWh, three batteries are necessary for a reliable backup.

The image shows an aerial view of a residential area where a large rooftop is equipped with a 10 kW solar panel array. The rooftop is densely packed with multiple rows of photovoltaic panels. On the left side of the image, a graphic overlay includes the Gridworks Energy logo in green and white, alongside text that reads "Everything to Know ...

I'm considering getting solar in Massachusetts, where you're guaranteed the right to net meter if you have 10 kW or less. I use a lot of electricity (1 EV and planning on a second, etc), so I would get a 10 kW system. Are there things you can do to squeak out a little more energy and stay at 10 kW, like a more efficient inverter?

A 10kW solar power system usually covers 55 to 70 square meters and can generate up to 16,700 kWh of electricity annually. The cost of a high-quality 10kW solar system falls within the range of \$9,900 to \$26,600.
