

These developments are propelling the market for battery energy storage systems (BESS). Battery storage is an essential enabler of renewable-energy generation, helping alternatives make a steady contribution to the world's energy needs despite the inherently intermittent character of the underlying sources.

Global energy demand is growing faster than expected and a more challenging geopolitical landscape--combined with the emergence of new sources of demand and smaller-than-expected efficiency gains--means the ...

What is energy storage? Energy storage absorbs and then releases power so it can be generated at one time and used at another. Major forms of energy storage include lithium-ion, lead-acid, and molten-salt batteries, as well as flow cells. There are four major benefits to energy storage. First, it can be used to smooth

As efforts to decarbonize the global energy system gain momentum, attention is turning increasingly to the role played by one of the most vital of goods: heat. Heating and cooling--mainly for industry and buildings--accounts for no less than 50 percent of global final energy consumption and about 45 percent of all energy emissions today (excluding power), 1 ...

The energy transition requires massive investments in infrastructure, including power generation, transmission, distribution networks, and energy storage. McKinsey's report estimates that achieving net-zero ...

Many people see affordable storage as the missing link between intermittent renewable power, such as solar and wind, and 24/7 reliability. Utilities are intrigued by the potential for storage to meet other needs such as relieving congestion and smoothing out the variations in power that occur independent of renewable-energy generation.

A new industry report with insights and analysis by McKinsey shows how TES, along with other forms of long-duration energy storage (LDES), can provide "clean" flexibility by storing excess energy (electrical or thermal) at times of peak supply and releasing it as heat when demand requires. It shows that when heat cannot be directly ...
