

If the sunlight is weak, the working voltage will be lower than 18V. It is easy to make the Solar micro-inverters work unstable, and the inverter will start repeatedly. In this case, micro Grid tie Inverter would be damaged easily! Recommended Solar Panel Voltage: $V_{mp}30-39V$; $V_{oc}38-46V$ (Battery is not recommended) If you have any questions about ...

Fronius inverters have a special MicroGrid setup to ensure stable MicroGrid operation. The inverter provides the MicroGrid with as much PV energy as possible. If the load is less than the maximum capacity of the PV generator and if the batteries are already full (or the charging power of the inverter charger is too low), automatic PV power reduction will be required.
