Baseline develops a proprietary H₂S treating system to sweeten sour gas and create new avenues to use wellhead gas to power NG generators. Baseline raises equity with an early stage minority equity partner; adds new credit facility to help grow fleet

The baseline model, an estimation of power or energy consumption before implementing energy management, is widely used to identify savings by comparing with the measured data after implementing energy management. This paper proposes power baseline modeling for split-type air conditioners using deep learning. Raw data is cleaned and prepared using data pre ...

I would like to thank Professor Claire Tomlin for introducing me to power systems and for her invaluable teachings and experimental advice. I also express my gratitude to Qie Hu, Datong Zhou, Ted Xiao, and the entire Hybrid Systems Laboratory at UC Berkeley for their support and guidance throughout this power systems project.

The More-Electric Engine (MEE), with its electrified engine auxiliary systems and increased multi-shaft power offtake, is likely to become an increasingly central aspect of future More ...

There is a clear need for a credible MEE baseline power system architecture concept, which provides all necessary key features for later certification compliance, and focuses on solution sets which are already tailored towards weight, efficiency, and reliability goals. From this baseline, further application-
