Then divide that number by the amount of power that a solar panel outputs per day/night cycle. Initially my numbers were off because I thought solar panels put out 45,000 per cycle, but it's actually 45,850 (give or take a kPs or two). That should give you the amount of solar panels you need to cover one day/night cycle of power.

Actionable Step: If your solar panels produce 5 kW daily, and you expect to use 30 kWh, consider the required battery size that can store excess energy generated during the day for night usage. Adjust battery size according to solar generation and typical energy consumption patterns to ensure efficiency. Steps to Size Batteries for a Solar System
