You can designate up to 8 machines per Energy Distributor Module, and each router can hold 9 Energy Distributor modules, allowing for one router to charge 72 machines within 40 blocks.

(All modular routers share the same ID so other players doing this would end up having quite literally the same ingredients as you and could pop off the finished crystal first, definitely a bad idea unless you are on a very teamwork oriented server).

Tried using modular router with an activator module, but for some reason, it doesn't work? Have tried with many different items in the buffer slot to use, but for whatever reason none have worked- have watched multiple guides on how to use them, followed their instructions and setting for the module, but it has not performed a single right click with the item in the buffer slot...
