

What type of energy is used in Benin?

The evolution of the electrical mix of Benin indicates that, in 2020, natural gas was the first form of energy used to produce electrical energy, representing a proportion of 71.63%. Solar photovoltaic (PV) accounts for 0.30% of the mix by form of energy compared with 1.36% in 2016, as shown in Fig. 3.

Are there empirical studies on Benin's energy situation?

However, no empirical studies were found in literature on studies of the Republic of Benin's energy situation, and so more research and studies focusing on Benin are needed. Table 1. Summary of literature on the subject. 3. Benin's energy situation 3.1. Energy consumption

Does wind energy contribute to the electrification of Benin?

Although hydroelectricity, biomass and especially PV technologies play an increasingly important role in the electrification of Benin, recent studies have shown that wind energy technologies can also contribute. Non-electrified rural and peri-urban localities have favourable wind potential in coastal Benin.

Does Benin have a rural electrification program?

The government attempted to bridge the gap by implementing a rural electrification program that seeks to increase levels of electrification in rural areas to 36% by 2015. As of 2020, approximately 32% of Benin's population has access to electricity, leaving approximately 1.5 million citizens without access.

Does Benin have a hydroelectric potential?

According to a study by Ref. , Benin has considerable hydroelectric potential for developing large, medium, small, and micro-hydroelectric plants in the Bétérou and Oloughé regions, for example, with estimated generation capacities at 70 GWh and 72 GWh, respectively.
