

Where is Bouvet Island?

Bouvet Island (/ˈbuːveɪ /BOO-vay; Norwegian: Bouvetøy [bʊˈvøː]) is an uninhabited subantarctic volcanic island and dependency of Norway. It is a protected nature reserve, and situated in the South Atlantic Ocean at the southern end of the Mid-Atlantic Ridge, it is the world's most remote island.

Where is Bouvet located?

As far as islands go, Bouvet is pretty insignificant--a speck of rock located in the South Atlantic Ocean over 1,600 kilometers off the coast of Antarctica. It is the most remote island in the world. Its nearest inhabited neighbor is Tristan da Cunha, an isolated spot by itself, located 2,260 kilometers away.

Who discovered Bouvet Island?

Bouvet Island (Bouvetøy) is an uninhabited sub-Antarctic volcanic island that belongs to Norway. Discovered on 1 January, 1739, by Jean-Baptiste Charles Bouvet de Lozier, commander of the French ships Aigle and Marie, it was the first landmass spotted south of the 50th parallel south.

Does Bouvet Island have a top-level domain?

To be fair, Bouvet Island is not the only uninhabited island with its own top-level domain. The Heard and McDonald Islands are also uninhabited with the domain .hm. But Australia, under whose jurisdiction the island lies, has opened up the .hm domain for use outside of the islands.

How do I register a domain on Bouvet Island?

The domain is managed by the Norwegian government, but there currently is no way to register a domain with this TLD. It remains unused along with .sj, another top-level domain managed by Norway and assigned to Svalbard and Jan Mayen. To be fair, Bouvet Island is not the only uninhabited island with its own top-level domain.

How big is Bouvet Island?

Landing is extremely difficult on the island. It has an area of 23 square miles (59 square km), rises to 3,068 feet (935 metres), and is uninhabited. Bouvet Island was discovered in 1739 by the French navigator Jean-Baptiste-Charles Bouvet de Lozier (1705-86), for whom it is named.

Así pues, durante mucho tiempo se pensó que aquello que habían visto en 1739 no era más que un iceberg. No obstante, aquella era una ruta muy frecuentada por los balleneros, que con el paso del tiempo se cartografió mejor la zona, hasta que, en 1964, se sobrevoló por primera vez en helicóptero pequeño y lejano rincón de tierra suspendido en el mar.

A ilha Bouvet (em norueguês: Bouvetøya) é uma ilha desabitada na extremidade sul do oceano Atlântico. Pertence à Noruega desde 1928. [1] [2] [3] é considerada como a mais isolada e desabitada ilha do mundo, [4] estando localizada a mais de 2 400 km a sudoeste do cabo da Boa Esperança e a cerca de 1 600 km a norte da Antártida. Seu nome provém de Jean-Baptiste ...
