

Are agrivoltaic pilot programs working in Africa?

Several agrivoltaic pilot programs, in partnership with mainly European research centers and agencies, are underway on the African continent. Results are nearly in for the research phase of one such one project in Algeria, Watermed4.0, according to German research organization Fraunhofer ISE, one of eight institutions involved.

Are agrivoltaic projects getting more attention in Africa?

With record-high temperatures in Northern Africa and worries over food security rampant from Egypt to Morocco, agrivoltaic projects in the region are getting ever more attention.

How can agrivoltaic projects help a rural region?

Agrivoltaic projects could help with both, restoring fertile conditions to areas in progressive abandonment. Agrivoltaic projects can also produce electricity to pump and desalinate water, opening the doors to agriculture in difficult regions and desert areas.

How can agrivoltaic technology improve food and energy security?

As food and energy security emerge as top priorities in several regions, an innovative use of existing technologies might help serve both: Agrivoltaic projects allow energy production and agricultural activity on the same land, potentially increasing farming productivity.

What are agrivoltaic projects?

The research-phase agrivoltaic projects combine several technologies, including solar-powered irrigation systems. The German development agency GIZ and the Food and Agriculture Organisation of the United Nations have already worked on these systems.

Do agrivoltaics increase crop yield?

Early data had some promising results: under the agrivoltaic installation there was a significantly higher yield and size of the crop compared with an uncovered reference field -- about 16% more, "Brendon Bingwa, project manager of Agrivoltaics Africa at Fraunhofer, told DW. Additional work will provide more data and evidence, he added.
