The battery port voltage can be 12V or 24V.. The MPPT port is connected to the battery via the DC/DC converter. This port is typically used as the solar panel input. If building a hybrid system, the MPPT port can be used for wind generator input (after rectification) and the solar panel is connected to the PWM port. For a pure wind energy system, the PWM port can be used for ...

?Application Scope?This hybrid charge controller is designed for dual voltage (12/24V auto detection) and supports a maximum of 800W for wind generators and 600W for solar panels. It is ideal for wind-solar hybrid street lighting or home-based wind-solar complementary systems
