

What is the government's vision for power generation in Congo?

The government's vision is to increase the service level to 32 percent by 2030. Lack of access to modern electricity services impairs the health, education, and income-generating potential of millions of Congolese people. Most power generation development is directed and funded by mining companies seeking to power their facilities.

How much energy will the Congo River provide in 2030?

The government's vision is to increase the level of service up to 32% in 2030. The Congo River, which is the second largest river in the world with its basin astride the Equator provides an energy potential estimated at 100,000 MW spread across 780 sites in 145 territories and 76 000 villages.

What is the energy potential of the DRC?

The DRC has immense and varied energy potential, consisting of non-renewable resources, including oil, natural gas, and uranium, as well as renewable energy sources, including hydroelectric, biomass, solar, and geothermal power.

How many people in DRC have electricity?

Despite millions of dollars of donor funding, according to the World Bank only 19 percent of the DRC's 108 million people have access to electricity - about 41 percent in urban areas and 1 percent in rural areas. The government's vision is to increase the service level to 32 percent by 2030.

How much power does Snel generate in DRC?

Of the total installed capacity in DRC estimated at 2,516 MW, Societe Nationale d'Electricite (SNEL) has a generation capacity of about 2,416 MW or 96% of Hydroelectric power which accounts of domestic power generation and is generated by the Inga I and Inga II dams that are located in Kongo Central province.

What is DRC's energy potential?

The DRC immense energy potential consists of non-renewable resources such as oil, natural gas and uranium, and renewable energy sources including hydroelectric, biomass, solar, wind, and geothermal power. The government's vision is to increase the level of service up to 32% in 2030.

This energy consumption in the Republic of Congo is expected to remain very high and grow in the coming years because the Republic of Congo has vast potential sources of biomass: Congo Basin forests, agricultural residues, wastewater, industrial residues, animal residues, and municipal solid waste, to name a few.

Olive Energy Congo integrated services rely on the use of multiple advanced niche technologies that are adapted to the complex African oil and gas exploration and development challenging environment. We invest in tools and equipment that facilitate and accelerate the exploration and development of African oil and gas

assets.
