

How can we manage Cuba's growing waste stream?

A new study has found that a combination of recycling, AD and gasification would be the most appropriate technology mix to manage Cuba's growing waste stream. Credit: Lyman Erskine Currently in Cuba legislation for the proper and efficient management and treatment of MSW is scarce and incomplete.

How much solid waste is diverted from landfill in Cuba?

Cuba's largest cities are not immune to these problems. Additionally, the estimated amount of solid wastes diverted from landfill would be around 311 tonnes per day- mainly C&D material due to the low recovery level expected for this waste in the front-end solid waste processing.

How much material flows to gasification in the Cuban case study?

Regarding this point, the estimated material flow to gasification in the Cuban case study would be a little over 8000 tonnes per year. Preliminary sizing The conceptually derived technological solution suggests that a modular-plant design can be achieved, which in turn would ensure flexibility to the operating condition.
