

Has anyone had issues with the Fafco brand Istor Ice Storage tanks? I work for a school district in Ohio where we have multiple sites with the Fafco and Calmac ice storage tanks used to supplement the chillers cooling loads. We currently are having multiple heat exchangers tubes bursts in only the Fafco brand. Is this a design issues that others in the ...

the ice storage to meet the cooling needs. The ideal arrangement is to have the chiller and ice storage piped in series with the ice storage located downstream, as shown in the schematic above. The glycol chiller's supply temperature set point can be reset to a temperature of say 45°F. For a system designed for an 18°F delta-T, the

The Ice Storage Test Facility (ISTF) is designed to test commercial cool storage systems. Transphase, Inc. provided a prototype of a new storage tank design equipped with coils designed for use with a secondary fluid system and filled with a eutectic designed to freeze at 41 {degree}F. ... FAFCO Ice Storage test report.

The Ice Storage Test Facility (ISTF) is designed to test commercial ice storage systems. Calmac provided a storage tank equipped with coils designed for use with a secondary fluid system. The Calmac ice storage system was tested over a wide range of operating conditions. Measured system performance during charging was similar to that reported ...

The FAFCO battery is environmentally-friendly and sustainable. FAFCO latent storage allows to valorise the energy surpluses of electricity produced and increases the self-consumption rate. The ice is stored during the hours when renewable energy production) is in surplus and then released during the hours when there is no production.

The combination of these skills has led to the development of a wide range of heating and cooling solutions for buildings, including reversible heat pumps, numerous industrial heat recovery systems, plastic heat exchangers, atmospheric collectors and ice storage systems. In 1986, at a time when the oil crisis had limited many energy-saving initiatives, FAFCO SAS decided to ...

FAFCO Switzerland builds a simple and unique Ice Thermal Storage system that has been proven as a favourite with the clients in nearly 30 years of successful operation in Europe with the fit it and forget it concept, FAFCO system operates years on end, without requiring any maintenance and service on their quality system.

The Ice Storage Test Facility (ISTF) is designed to test commercial ice storage systems. FAFCO provided a storage tank equipped with coils designed for use with a secondary fluid system. The FAFCO ice storage system was tested over a wide range of operating conditions. Measured system performance during charging showed the ability to freeze the tank fully, storing from ...

FAFCO systems are based on very simple technology, with no moving parts, making maintenance requirements very low. FAFCO recommends an overall maintenance programme every 7 years, consisting of a visual inspection of the storage system and the preventive replacement of certain parts, in order to guarantee operation until the next maintenance visit.

Ice storage shifts power demand to low cost periods. Reduce energy costs by shifting peak power demand to night time or off-peak periods. Avoid on-peak, time-of-use rates and high ratchet-based demand charges. Off-peak electricity rates can be 50% to 80% lower! This huge energy cost saving provides short payback periods for ice storage ...

Loading the ice storage The charge of FAFCO's accumulators is a very stable and homogeneous process. Typically, the glycoled water enters at a stabilized temperature of -5°C and exit at -2°C with a constant flow rate during the whole charge (about 8 hours).

Multiple times, FAFCO entered break out markets including thermal batteries, solar water heating systems, and photovoltaic / thermal panels and systems. For the past five years, we've been working on a novel solar thermal assisted heat pump water heater. Along the way, we survived many existential threats to the business including Reagan's ...

The FAFCO ice storage system was tested over a wide range of operating conditions. Measured system performance during charging showed the ability to freeze the tank fully, storing from 150 to 200 ton-h. However, the charging rate showed significant variations during the latter portion of the charge cycle. During discharge cycles, the storage ...
