

Cyprus solution to poor power supply inia

What is Cyprus' energy supply?

Cyprus' total energy supply consists by 85% of fossil fuels, of which petroleum products dominate. Some diversification will happen once the Cyprus LNG import terminal is in operation, so that most of the thermal power plants will run on natural gas.

How can Cyprus curb its energy dependence?

Overall, to curb its energy dependence, Cyprus must invest in further energy efficiency improvements in buildings and road transport and accelerate the deployment of renewables.

Why does Cyprus have a high electricity price?

Cyprus has one of the highest electricity prices in Europe, due to high reliance on liquid fuel for power generation. However, a major transition is imminent for electricity supply. On one hand, indigenous natural gas discoveries are to be developed in the coming years.

Why is repowerEU not relevant for Cyprus?

The two other main areas of REPowerEU - diversifying energy supply and reduction of fossil fuel use in industry - are less pertinent for Cyprus for the reasons explained below, hence the relevant investments and reforms are included under the areas of energy savings and renewable energy.

How will Cyprus achieve a higher share of renewables?

Cyprus has set out to attain a higher share of renewables, and this roadmap helps to assess optimal investment strategies in the power sector. Solar PV and wind power will play a major role in the roadmap to 2030. Roadmap findings will play an important role to revise existing energy policies and develop new ones.

Can a long-term energy planning model be used in Cyprus?

In order to examine options for economically optimal deployment of renewable energy in Cyprus under different scenarios, and to understand the potential impact of key policy decisions on the power generation mix, a long-term energy planning model of the current power system in Cyprus was developed.
