

What is the energy sector like in Czech Republic?

Includes a market overview and trade data. The Czech energy sector is largely built around two large nuclear plants and several smaller conventional coal power plants. Nuclear and coal power plants provide primarily baseload power at a high level of utilization, while gas fired units, reservoir hydro and pumped storage provide flexible generation.

Does the Czech Republic have a new energy policy?

The Czech Republic approved a new National Energy Policy (SEP) aiming to reduce energy consumption and improve the economy's energy intensity. However, reaching the targets of the SEP will require greater effort if the country is to play its part in the g

How is energy used in Czechia?

Total energy supply (TES) includes all the energy produced in or imported to a country, minus that which is exported or stored. It represents all the energy required to supply end users in the country.

What is the energy mix in the Czech Republic?

The Czech energy mix was made up of 53.60 percent fossil fuels (47.50 percent lignite, 5.86 percent natural gas, etc.), 40.95 percent nuclear power, and 5.46 percent renewables (3.34 percent biomass, 1.47 percent solar, 0.63 percent water, etc.).

Is coal still used in Czech power generation?

Coal still provides most of the fuel used in Czech power generation. While coal's phase-out is assumed in 2035-2038, coal-based energy companies already face difficulties due to the rising costs of carbon credits and other impacts of the EU's Green Deal.

Where does the Czech Republic buy oil & gas?

The country is integrated into regional transmission systems and can purchase oil and gas from different countries based on market prices in Rotterdam or elsewhere. Most oil and gas are imported via Germany. The Czech Republic has two nuclear power plants at Dukovany and Temelin, which delivered over 31 TWh of electricity in 2022.
