

uhm... i somehow filled the tier 8 draconic storage within a second in survival on a public server with no creative items at all .\_. I was starting to import the first bit of energy into the core with a mekanism entangluporter and some cryo stabilized ...

I cut a bit too low on the input and lost integrity, which cost me the reactor + 2 tier-3 draconic energy storage cells. Pretty expensive loss. After that, I started digging for more automated methods of control. -edit #2: Just read some of my notes. Input gate (to energy injector) was at 122,689, and output gate was 568,439, by which I had ...

Thoughts on 1.10.2 Draconic Evolution Tier 8 Power Storage? The entire thing is made of awakened draconium blocks, and it's one layer larger then the previous, Tier 7. Good luck lmao - No idea how much power it holds, but I'd have to guess in the 100+ trillions possibly Quadrillions.

So, I've built a Tier 4 Energy Storage multiblock today. Everything worked fine and it's charging like it's supposed to. To the problem. I left it to charge a bit while doing other stuff in my base. When I later came back to check the energy it was like half charged Up. Then i came back even later and it has started to charge from the bottom ...

A fully loaded max size mekanism storage could store 800.000.000.000.000 RF 9,223,372,036,854,775,807 is the last stage of the draconic energy core which is the ultimate storage honestly mekanism is a little bit op because it makes 1-7 of the energy core useless one cell of the lowest tier 400 MRF is already more powerful than stage 1 and 2 ...

After 8 months of passionate development, we are proud to announce Triforge II! The most cohesive, quality focused, Sandbox overhaul take on modern Minecraft (Forge 1.19.2) YUNGNICKYOUNG

And according to the wiki, and the in game information tablet, a tier 1 Energy Core does not require any Redstone blocks or Draconium blocks. I also attempted building a tier 4 in creative, I was told by the Energy Core GUI that the core was valid (much like my tier 1 in survival), but the stabilizers are invalid.

Hi! I have been playing on a modded survival world on 1.7.10 for a little bit now and i have completely filled a tier seven draconic energy core (2.14 Trillion Power)! I am wondering if there is any way to either add another mod or make something that can store even more power than just simply making another core (which I don't want to do ...

My draconic energy storage on my Project Ozone 3 world continues to reset once it reaches 2.1 billion rf. It is tier 4 and has a capacity of 9.8 Billion. The pack is unchanged except for adding optifine. I have attempted

changing tiers to see if it was just an issue with the tier 4, however it occurred on higher tiers also.

[Stoneblock] Filling a Tier 8 Energy Core (credit /u/furitiem) ... you need to make a refined storage or AE system or colossal chest for this. Its way too many items to transfer by hand. ... even the draconic evolution debugger ingot. Command ...

Tier 8 draconic evolution energy core, done in survival on my server. ... I have the materials for it. 10 tier 6 ET solars will do 1.7 billion a tick, and I could do that lol. But whyyyyyy!! ... I guess that's the only point in making an infinite storage to begin with haha. I really wanted to fill it up (it's only 9 quintillion storage) but I'm ...

Schematic files for modded Minecraft that can be used with Schematica and WorldEdit. - modded-schematics/Draconic Evolution/[Draconic Evolution] Energy Core Tier 8.schematic at master · eddoww/modded-schematics

Unless you use a mod that explicitly puts out that much energy in one shot, it takes a long time EVEN WITH CREATIVE MEANS. Seriously, even the Creative RF Generator from DE only puts out 2.14 Billion RF/tick and having a bunch of those doesn't even put a dent in the energy ball.

A Career Bees Energy Bee with Robotic Speed gene in an Alveary with 10 Resilient Frames, one Healing Frame, one Metabolic frame and one Eternal Frame produces 2,123,366,400 RF/t. And I have 48 Alvearies in ...

The range is something like 8 or 16 blocks away as well. It's in the tablet I'm sure. Also as neutron mentioned make sure the particles are going toward the core if not right click the orb to change it.

The energy core can be filled with 9223372036854775807 rf ( $2^{63}-1$  rf), this is a large number, now: assuming you have 250 million rf/t production (Yes, I know, 99.9999% of people will never have this production rate, that's why i'm using it) it will take  $(2^{63}-1)/(250000000*20*60*60*24*365.25)$  years to complete, this is 58 years!
