According to Power Technology's parent company, GlobalData, global energy storage capacity is indeed set to reach the COP29 target of 1.5TW by 2030. Rich explains that pumped storage hydroelectricity (PSH) has been central to the energy transition, having contributed more than 90% of deployed global energy storage capacity until 2020.

There are thousands of extraordinarily good pumped hydro energy storage sites around the world with extraordinarily low capital cost. When coupled with batteries, the resulting hybrid system has large energy storage, low cost for both energy and power, and rapid response. Storage is a solved problem.
