

What is the energy situation in Yemen?

Energy in Yemen refers to the energy and electricity production, consumption, and import in Yemen. Yemen is a net energy exporter. The primary energy use in Yemen was 87 TWh in 2008 and 88 TWh in 2009, which equates to 4 TWh per million people.

Is Yemen an energy importer?

Yemen is not a net energy importer, but it has the lowest level of electricity connection in the Middle East, with only 40% of the population having access to electricity. Rural areas are particularly badly affected.

Is there a new power plant in Yemen?

In August 2013, Yemen began construction of a new 400 MW (Ma'rib II) gas-fired power generation facility, which is scheduled to start operation at the end of 2014, but was delayed to the recent years due to the recent security turmoil (Economic Consulting Associates Limited 2009; Arab Union of Electricity 2015; U.S. 2017; Rawea and Urooj 2018).

How is Yemen dealing with energy problems?

Yemen is dealing with the dilemma of energy networks that are unstable and indefensible. Due to the fighting, certain energy systems have been completely damaged, while others have been partially devastated, resulting in a drop in generation capacity and even fuel delivery challenges from power generation plants.

Does Yemen have a power network?

Yemen has received considerable support for the development of its power generation network in recent years, with contributions coming from Saudi Arabia, France, the US, as well as multilateral donors such as the World Bank.

Is there a shortage of electricity in Yemen?

Yemen is experiencing a severe shortage of several gigawatts of electricity, according to the Yemen Public Electricity Corporation (YPEC), which is a semi-independent arm of the Yemen Ministry of Electricity and Energy (YMEE) (World Bank 2009).
