

Equinor has approved the final investment decision of its first battery energy storage asset in the UK. The move follows the Norwegian oil and gas giant acquiring a 45% stake in UK utility-scale storage and stability services developer Noriker Power in December 2021.. In addition to this equity investment, Equinor has a strategic cooperation framework with Noriker ...

Battery energy storage company Field is to build a portfolio of four assets across the UK after securing financing from investment firm Triple Point Energy Efficiency Infrastructure Company (TEEC). TEEC announced today that it will provide Field with a debt facility totalling £45.6 million that will allow the company to construct the 110MW ...

Europe alone needs 200 GW of energy storage by 2030 to manage the variability of solar and wind and keep electricity flowing steadily to households and businesses. Most of this storage capacity will come from Li-ion batteries, which have a proven track-record and, as such, are the most bankable of storage technologies.

Adaptogen Battery Storage LP fund is an energy infrastructure fund focused on developing, constructing and operating grid-scale and distributed storage assets in the UK and Ireland. The firm stated that the fund is ...

New York's governor Kathy Hochul has welcomed the start of commercial operations at a 20MW battery energy storage system (BESS), the US state's first project of its type in public ownership. ... Northern New York ...

The Faroe Islands have made a significant leap in their renewable energy journey, thanks to the integration of a battery energy storage system (BESS) from Hitachi Energy. During 2022 and 2023, the BESS has ...

Gore Street Energy Storage Fund has confirmed that energisation for a 79.9MW battery storage asset in Milton Keynes is set to begin on 31 July. In its latest portfolio and trading update, the fund said the energisation process of the Stony asset has been scheduled with National Grid ESO. Once completed, the site will bring the company's total ...

The battery storage asset, which is to be located in Abernethy, Scotland, will store renewable energy generated by offshore wind farms in the North Sea. According to Centrica, the battery asset is scheduled to be connected to the grid in 2028 and could discharge energy up to four times a day. This could provide a key balancing mechanism for the ...

The projects, which are conditional on signing a capacity investment scheme agreement, are expected to commence operations by mid-2027. The CIS aims to encourage new investment in renewable energy dispatchable capacity, such as battery storage and generation from solar and wind, to meet growing electricity

demand and fill reliability gaps as older coal ...

Porkeri wind farm was inaugurated at the beginning of this year, hosting seven turbines with a capacity of 6.3MW. Image: SEV. Hitachi Energy has been selected to supply a large-scale battery energy storage system (BESS) for a wind farm in the Faroe Islands, as the remote archipelago targets a goal of 100% renewable energy.

As utility-scale battery development continues in ERCOT, the role storage plays will likely change as it did in CAISO. The integration of large amounts of battery storage poses new challenges and opportunities, as battery technology is fundamentally different from that of more traditional power generators like gas and hydroelectric resources.

Faroe Islands Wind-Battery project SEV: vertically integrated utility - Target 2020: 75% renewables with hydro & wind o 60% reached in 2015 New 12MW wind farm with ESS in 2015 -Total wind capacity 18MW -30% of total generation capacity -18% of yearly energy consumption o 42% hydroenergy, 40% thermal generation Long term vision

To study the impact of price arbitration on overall revenue, Publicis Sapient analyzed three battery projects to deep dive into their transactions and revenue-sourcing strategies. The projects included project #1 (20 MW), project #2 (40 MW) and project #3 (250 MW) battery storage systems, based in San Diego and Los Angeles counties.

Construction of the battery storage system is set to begin later this month for a scheduled start of commercial operations in mid-2027. Michael O'Rourke, CEO of Stanwell, which has one other coal plant and a gas-fired power plant, said the publicly owned power company is targeting putting 5GW of energy storage resources in its portfolio by 2035.

It represents a coming of age for the battery energy storage sector." Rupen Tanna, Head of Power and Systematic Trading at Shell Energy Europe, added: "The Bramley battery system is one of the most sophisticated longer-duration assets under construction in the UK and will provide us with unmatched capabilities for portfolio optimisation."

New York's governor Kathy Hochul has welcomed the start of commercial operations at a 20MW battery energy storage system (BESS), the US state's first project of its type in public ownership. ... Northern New York Energy Storage Project, the first BESS asset in its ownership, "is a reliability and resiliency energy storage trendsetter that ...
