

The Transition Metals Outlook is BNEF's annual long-term outlook for the role of metals in the energy transition. It empirically determines how the shift to a low-carbon economy will drive demand for metals and answers the question of whether there will be enough supply to meet demand. ... (e.g.: solar, wind, storage, decentralized energy ...

Based on bankability as evidenced by deployment, the system is designed to create a transparent differentiation between the hundreds of stationary energy... BNEF Energy Storage Tier 1 List 4Q 2024 You must login to view this content.

IRENA's 1.5°C Scenario, set out in the World Energy Transitions Outlook, presents a pathway to achieve the 1.5°C target by 2050, positioning electrification and efficiency as key transition drivers, enabled by renewable energy, clean hydrogen and sustainable biomass.

A new report from Bloomberg New Energy Finance (BNEF) details how more than US\$8 billion will be invested in new-build energy storage in the year 2024, driven by an increase in deployment of behind-the-meter storage. Repurposed EV batteries could rival first-life storage systems - ...

The Transition Metals Outlook is BNEF's annual long-term outlook for the role of metals in the energy transition. It empirically determines how the shift to a low-carbon economy will drive demand for metals and answers the question of ...

The Energy Storage Report 2024. Now available to download, covering deployments, technology, policy and finance in the energy storage market. Download for Free. ... BNEF's 'New Energy outlook 2015: Long-term projections of the global energy sector' forecast a boom in solar over the next 25 years, with PV accounting for 35% (3 ...

Power grids need three things in the coming decades to keep up with the energy transition: money, wires and digital tech. More than \$20 trillion flows into the world's grids between now and 2050 in BloombergNEF's Net Zero Scenario - or 70% of all...

New Energy Outlook 2024: China. You must login to view this content. Login China is already the world's largest investor in the energy transition and is aiming to reach carbon neutrality by 2060. But this target could be more ambitious to help the world get on track for the Paris Agreement's goal to limit global warming to...

The global energy storage market is growing faster than ever. Deployments in 2023 came in at 44GW/96GWh, a nearly threefold increase from a year ago and the largest year-on-year jump on record. BloombergNEF expects 67GW/155GWh will be added in 2024,...

The falling costs of grid-scale battery energy storage system (BESS) technology, a topic that has been much discussed recently on Energy-Storage news, will support growth, BNEF said. It found that as of February 2024, a 2-hour duration turnkey BESS in China cost an average of US\$115/kWh, a 43% decrease from a year before.

Singapore, October 16, 2024 - Asia Pacific (APAC) should accelerate the deployment of mature technologies, support emerging climate solutions, and scale up finance for the energy transition to stay on track for the Paris Agreement, according to Asia Pacific's Energy Transition Outlook, a report from BloombergNEF (BNEF) published in collaboration with GenZero.

BNEF separated capacity as "undefined" in the technology mix outlook for the first time to address capacity being built under "other" applications, which includes long-duration energy storage (LDES). Within LDES, energy storage technologies other than lithium-ion and sodium-ion batteries will play a role, including non-battery ...

Corporations announced a record 46 gigawatts of solar and wind power purchase agreements, or PPAs, in 2023. This was the seventh year that the corporate PPA market reached a new high. The US was the largest market with over 17.3GW announced, while...

Global energy storage additions will reach 58GW/178GWh in 2030, more than five times the record capacity installed in 2021 (10GW/22GWh). Although supply-chain constraints have dampened deployments in the near term, more markets are beginning to use...

The global energy storage market is set for another record year. BloombergNEF expects 69GW/169GWh of additions in 2024, up 76% in gigawatt-hours from 2023. China continues to lead installations thanks to provincial co-location mandates, but a slight...

Tokyo, September 30, 2024 - Japan will need investment of about ¥320 trillion (\$2.2 trillion) over the next decade if it is to stay on course to reach net-zero by 2050, according to BloombergNEF's (BNEF's) New Energy Outlook: Japan, a follow-up to the research provider's New Energy Outlook 2024 released in May. The new report indicates the country, still heavily reliant on fossil ...
