To produce 2000 kWh per month, the size of the solar system needed depends on how much sunlight the state gets. Regions that receive an average of 4.5-5 hours of sunshine per day throughout the year require a 14,800

Watt solar system. Areas with limited sunlight require a larger solar system to generate the same amount of energy.

A solar electric system converts sunlight into electricity using solar cells. Solar panels can be mounted on rooftops or the ground, and convert particles of light energy, known as photons, into direct current (DC) electricity. An inverter changes DC power into alternating current (AC) to power your home or facility. Solar is a proven technology.
