

Could India be a superpower?

Yet size matters: with its huge population and a big economy, India would be a superpower, not fully matching China or the US, but unquestionably a great power. What might prevent this from happening? One reason might be the slowdown in global economic growth noted in the IMF's April 2024 World Economic Outlook.

How is India advancing Advanced Energy Solutions?

As the world watches, India is progressing advanced energy solutions rapidly. India is setting ambitious targets for deploying advanced energy solutions such as clean hydrogen, energy storage and carbon capture. By 2030, it plans to invest over \$35 billion annually in these areas.

What will India's energy future look like?

According to Jennifer Granholm, US Secretary of Energy, "In so many ways, the world's energy future will depend on India's energy future." In line with this, the country is adopting ambitious goals for deploying solutions such as clean hydrogen, energy storage, carbon capture and sustainable aviation fuels.

How much power does India need a year?

Fernandes and other experts say India needs to install at least 50 to 60 gigawatts of clean power each year to meet growing demand. In the last two years, due to a mix of policy decisions, politics and supply chain issues, less than 15 gigawatts of wind and solar have been installed annually.

Is India's power growing in Asia?

Asia is the fastest-growing region globally, and nearly all major international powers want to expand their horizons here. The Asia Power Index Report 2024 by the Lowy Institute, an Australian think tank, suggests that India's power in Asia is growing, and the country has overtaken Japan to bag third spot for the first time.

Will India triple nuclear power capacity by 2032?

The report further examines India's efforts to expand its nuclear power infrastructure, stating that the country plans to triple nuclear power capacity to 22.5 GW by 2032. The scaling up of solar, wind, and hydropower capacities is also identified as a key step toward ensuring a steady supply of clean energy.
