

Who is EnerDel?

EnerDel was the first in the U.S. for commercial-scale production of large-format, prismatic, lithium-ion battery packs. Over the last decade, EnerDel has worked to perfect the cell modular stacking architecture and battery management system, providing customers with production-ready solutions to address a variety of power and energy storage needs.

When will EnerDel build iego 800V battery packs?

EnerDel's engineering team designed and procured the components to build the first iEGO 800V battery packs, leveraging NMC (Nickel Manganese Cobalt) VDA modules as the building block. The build is scheduled mid-February, 2023 with testing and validation to begin immediately after at EnerDel's Headquarters in Anderson, IN.

How does the EnerDel 800V battery pack work?

The two-layer 800V battery pack integrates the base and the cooling plate in a single structure, maximizing volumetric density. After testing, EnerDel Engineering will develop a production intent design and manufacturing plan based on lessons learned. The next phase of the validation plan will focus on regulatory and customer requirements.

What will EnerDel engineering do after testing iego battery packs?

After testing, EnerDel Engineering will develop a production intent design and manufacturing plan based on lessons learned. The next phase of the validation plan will focus on regulatory and customer requirements. Mass production of iEGO battery packs for customers is slated to commence mid-2024.

How did EnerDel design iego?

EnerDel's engineering team took a proactive and innovative approach for the initial iEGO design. The two-layer 800V battery pack integrates the base and the cooling plate in a single structure, maximizing volumetric density. After testing, EnerDel Engineering will develop a production intent design and manufacturing plan based on lessons learned.

What can EnerDel vigor+ do for You?

EnerDel's Vigor+ packs offer versatility across applications, including transportation in EV/Hybrid buses and trucks; industrial equipment, trams, construction, agricultural machines, and military and civilian stationary and mobile hybrid power systems.

Discover the future of sustainable transportation with Evolve Electrics--your premier destination for cutting-edge electric vehicle components, charging solutions, and renewable energy products. Offering a comprehensive range of high-quality electric motors, battery systems, and solar power technology, Evolve Electrics

On-road Battery Testing Electric Drive and Advanced Battery and Components Testbed (EDAB)- EnerDel. The ESS evaluated in the EDAB testbed is the EnerDel Type I EV, which is designed for a small EV sedan. This evaluation was completed in December 2013 with an accumulation of 27,880 miles and a total throughput of 45,767 Ah.

Workhorse Selects EnerDel As Battery Supplier: Orders 5,200 Packs Prototype testing shows that a 70 kWh EnerDel pack can take a fully loaded C-Series vehicle for 125 miles (200 km) on a single charge.

EnerDel's T100 Secure+ Battery Management System offers: Safely integrates battery or energy storage system with your application; Provides easy interface to commonly-used controllers; Provides control and management of the lithium-ion cells in the battery banks, including balancing the energy of the system at the cell level

Enerdel battery module disassembly. Thread starter Ratking; Start date Apr 14, 2015; Rating 1 kW. Joined May 20, 2010 Messages 494 Location Norway. Apr 14, 2015 #1 ... When judging a battery or cell for pure power performance, the Short Discharge Time is a useful parameter or tool to use. Here is a white paper on it and a chart with popular ...

ENER1 Inc. announced that its EnerDel battery subsidiary has received a contract from the U.S. Advanced Battery Consortium (USABC), a part of the United States Council for Automotive Research (USCAR), an organization founded by DaimlerChrysler, Ford and General Motors that works with the Department of Energy (DOE) to strengthen America's ...

The new plant will give EnerDel the capacity to produce battery packs - in theory -- for approximately 600,000 hybrid electric vehicles, or 60,000 battery electric cars. It will be financed through a \$118.5 million grant awarded under the federal stimulus package under a 50:50 cost-share program, of which EnerDel plans to spend \$60 million ...

Italy. Netherlands. Norway. Sweden. Switzerland. ... Tech Spec for EnerDel battery in Volvo C30 DRIVE Electric. Rated system energy: 23kWh. Pack A capacity: 35Ah Pack B capacity: 35Ah Nominal voltage: 345V Operating voltage range: 240V to 393V Max continuous power capability: 76kW discharge, 24kW charge

The new plant will give EnerDel the capacity to produce battery packs for approximately 600,000 hybrid electric vehicles, or 60,000 battery electric cars. It will be financed through a \$118.5 million grant awarded under the federal stimulus package under a 50:50 cost-share program, of which EnerDel plans to spend \$60 million in 2010. ...

EnerDel is committed to safety, beginning with ensuring a safe work environment for our employees to ensuring safe product design and best practices. From our opposing terminal cell design, all the way to our battery management system, we design our products with our employees, customers, and the communities we

serve in mind.

EnerDel, a leading Li-ion battery pack manufacturer, completed the first phase of their next generation family of battery packs, iEGO. EnerDel's engineering team designed and procured the components to build the first iEGO 800V battery packs, leveraging NMC (Nickel Manganese Cobalt) VDA modules as the building block.

"EnerDel's proven performance and its production capacity are an important supplement to our in-house battery manufacturing operation as we gear up for growth at scale," said Workhorse COO Dr ...

EnerDel, the subsidiary of Ener1 Inc that recently got some cash from the Department of Energy for battery development will be making a big announcement next Tuesday. The company plans to show off ...

**PRESS RELEASE: EnerDel Awarded \$4 Million Federal R& D Contract Company to Develop New Hi-Performance Lithium-Ion Battery Technology for Cold- Climate Operations and Unmanned Aerial Vehicles**

The new plant will give EnerDel the capacity to produce battery packs - in theory -- for approximately 600,000 hybrid electric vehicles, or 60,000 battery electric cars. It will be financed through a \$118.5 million grant awarded ...

In cooperation with Enerdel, Elithion now offers 1.5 kWh, 48 V Enerdel battery blocks with and integral BMS board, ready for easy inclusion in your high performance traction pack for a race EV. One to 16 modules may be used for traction packs from 44 to 700 V, from 1.5 to 20 kWh, from 40 to 700 kW peak power.
