

Does Kenya have solar power?

Kenya has a high potential for solar power given the high irradiation levels available throughout the year. Kenya added 120MW of solar power to the grid in 2021, raising the total generation to 172MW. There are various other solar projects in different stages that are envisioned to come online from 2023.

What is Kenya's energy sector like?

The sector presents opportunities for trade and investment, especially in renewable sources like geothermal, solar, and wind. Around a third of Kenya's installed capacity is owned and operated by IPPs across several plants, including small-scale hydro plants, geothermal, biomass, wind, solar, and heavy fuel oil plants.

Which SHS companies sell solar equipment in Kenya?

Kenya has also adopted national standards for solar equipment, thus ensuring the quality of products offered in the market. The four leading SHS companies in Kenya by volume sold are all U.S.-registered (BioLite, d.Light, Greenlight Planet, and M-Kopa). They hold 42% overall market share.

Who owns the electricity in Kenya?

Around a third of Kenya's installed capacity is owned and operated by IPPs across several plants, including small-scale hydro plants, geothermal, biomass, wind, solar, and heavy fuel oil plants. The remaining capacity is owned and operated by Kenya Electricity Generating Company (KenGen), which is 70% government-owned.

Which energy sources are used in Kenya?

Renewable Sources: Over 80% of Kenya's electricity is generated from renewable/clean energy sources. Of these, geothermal remains the most significant source with an estimated potential of 10,000MW, but it remains relatively unexploited with a current installed capacity of less than 863MW.

What is Kenya's energy mix?

Current Energy Mix: Kenya's energy mix predominantly consists of green energy with geothermal, hydro, wind, and solar accounting for roughly 81% generation 2021. The remainder is filled by thermal, biomass, and imports.
