

Is Madagascar ready for solar power?

With all regions of Madagascar enjoying over 2,800 hours of sunlight per year, the Grande Ile is the perfect location for development of solar power, with a potential capacity of 2,000 kWh/m²/year. The Government is counting on this potential to fulfill its objective of providing energy access to 70% of Malagasy households by 2030.

Does Madagascar have a potential for energy from biofuels?

There is potential for energy from biofuels using agricultural waste from the sugar sector. Jatropha is also being cultivated for its oil which is used variously in the biofuels industry. Only 1.9 per cent of Madagascar's hydroelectric power potential has currently been used (REEEP, 2012).

Is Madagascar a member of the southern Africa Power Pool (SAPP)?

On a regional level, Madagascar is a member of the Southern Africa Development Corporation, but not yet a member of the Southern Africa Power Pool (SAPP). The legal framework is provided by the Law No. 98-032 on energy of 1999. A policy and national energy strategy is being developed with plans to reform the electricity sector.

Madagascar is among Africa's richest countries in terms of renewable energy potential. Many of the island's regions have more than 2800 hours of annual sunshine, which are some of the highest levels on the continent. The north and south of Madagascar have wind speeds that are highly favourable to the production of electricity.
