

First, you need a router with a fluid module in it, as well as needing to have a bucket within those routers to connect them to pipes. If you are doing both pulling and extracting on the same time, you need to first have the module in hand and set one to transfer into the router and the other to transfer out of the router.

when I had this issue, it was because I didn't have enough speed upgrades or energy upgrades on the modular router providing the energy. The speed upgrades was super important Reply reply Top 3% Rank by size . More posts you may like r/esp32. r/esp32. This Router has to output to 8 other routers, which each places one ore. The setup now is one Modular Router with four distributor modules (DM) that get items from chests, and one that distributes these items randomly to one of 8 other modular routers. The distributor modules that get items from chests, are set on nearest first.

Tried using modular router with an activator module, but for some reason, it doesn't work? Have tried with many different items in the buffer slot to use, but for whatever reason none have worked- have watched multiple guides on how to use them, followed their instructions and setting for the module, but it has not performed a single right click with the item in the buffer slot...
