

What is Luxembourg's energy system like?

Luxembourg's energy system is characterised by high import dependence and reliance on fossil fuels. In 2018, 95% of its energy supply (100% of oil, natural gas and biofuels and 86% of electricity) were imported. It had the fourth-highest share of fossil fuels in TPES (78%) and the highest share of oil in TPES (60%) among IEA member countries.

Is Luxembourg a net energy importer?

Luxembourg is a net energy importer; 81.5% of the electricity consumed in the country, for example, was imported from neighboring European countries in 2021. There was no decline in the climate change gas emissions (CO₂) from year 2008 to 2012 in Luxembourg. There was no better efficiency in the use of electricity from 2008 to 2012.

How much electricity does Luxembourg use?

Electricity sector in Luxembourg is the main article of electricity in Luxembourg. Primary energy use in Luxembourg was 48 TWh in 2009, or 98 TWh per million inhabitants. Luxembourg is a net energy importer; 81.5% of the electricity consumed in the country, for example, was imported from neighboring European countries in 2021.

Why is Luxembourg focusing on a new energy source?

Although the increase of the share of the electric power is ambitious, Luxembourg has started focusing on developing another energy source as an alternative to the fossil fuels from which 77% of Luxembourg's energy is currently sourced.

Why does Luxembourg have a low energy cost?

The low costs of energy in Luxembourg and the high purchasing power of its residents represent a significant barrier to achieving the energy sector targets. Low taxes result in low electricity, natural gas and heating oil prices providing little incentive to invest in renewables and energy efficiency.

Is biomass a source of electricity in Luxembourg?

Traditional biomass - the burning of charcoal, crop waste, and other organic matter - is not included. This can be an important source in lower-income settings. Luxembourg: How much of the country's electricity comes from nuclear power? Nuclear power - alongside renewables - is a low-carbon source of electricity.
