

Does Norfolk Island have too much solar energy?

That's pretty impressive given its remoteness and a population of 1,849. But this uptake has also caused some headaches in managing Norfolk Island's electricity network, with too much solar energy goodness generated at times. The Tesla battery system installed in December 2020 has helped out on that front.

Why is Norfolk Island transitioning to green energy?

Norfolk Island is transitioning to green energy to reduce its dependence on diesel-fired generation, which is becoming more expensive and more difficult to source as countries around the world seek to decarbonize their economies. This initiative is comprised of several interrelated elements: Project Background

How many solar panels are there in Norfolk Island?

44 km of high and 44 km of low voltage cabling. Distributed household rooftop PV systems. There have been more than 555 small-scale solar power systems installed on Norfolk Island, with a collective capacity of 1,770 kW. That's pretty impressive given its remoteness and a population of 1,849.

What is Norfolk Island's diesel-fired generation initiative?

This initiative is comprised of several interrelated elements: Project Background In 2022, the Commonwealth Government provided a \$5.25 million grant to Norfolk Island Regional Council to transition the island away from diesel-fired generation.

Does Norfolk rely on diesel?

Like many island communities, Norfolk has traditionally relied on diesel for electricity generation. The community is in the process of shifting entirely to much cheaper and cleaner renewable energy, but that transition can't happen fast enough.

Will Australian government help Norfolk Island's diesel-based electricity cost woes?

The Australian Federal Government has stepped in to give the folks on Norfolk Island some relief from their diesel-based electricity generation cost woes. Norfolk Island is a tiny island (3,455 hectares) in the South Pacific Ocean.
