

Is Norway a first-mover in green hydrogen production?

With a global portfolio of renewable energy assets, Norway is a well-positioned first-mover in green hydrogen production. Green hydrogen is produced through a zero-emission process using water electrolysis with renewable energy. Norway is uniquely equipped to take green hydrogen to the next phase of maturity.

Is Norway ready for green hydrogen?

Norway is uniquely equipped to take green hydrogen to the next phase of maturity. It is also on the cutting-edge of low-carbon blue hydrogen. "Norway is combining its proud offshore and maritime heritage with a 100-year history of hydrogen production in a 21st century race to mitigate climate change," explains Theien.

Why does Norway want to enter the battery production industry?

The country wants to enter the battery cell production industry, hoping to benefit from access to green power and proximity to European customers keen to source batteries away from China. Innovation Norway said the loan facility contributed to the realisation of the government's battery strategy.

Does Norway have a Hydrogen strategy?

Norway plans to deploy low-carbon and green hydrogen at a large scale across all hard-to-decarbonise sectors at home and to support the energy transition in Europe and globally. Both the Norwegian hydrogen strategy and the EU hydrogen strategy regard hydrogen as essential for achieving a net-zero emission society by 2050.

What will Norway's hydrogen hubs do?

The hubs will be an essential part of Norway's clean hydrogen infrastructure and connect Norwegian players with the EU hydrogen valleys emerging in Europe. In addition, EUR 41 million in funding was allocated for seven pioneering hydrogen and ammonia-powered vessels, to be among the world's first to use hydrogen for propulsion.

Can Norway help the EU meet its hydrogen import goals?

The EU aims to produce 10 million metric tons and import 10 million metric tons of renewable hydrogen by 2030. If all goes as planned, the Norwegian hydrogen industry will be able to help the EU to meet its import goals. "We have the potential to produce more low-carbon and green hydrogen than we can use ourselves.
