The price of solar panels is 23% cheaper over the past five years. In contrast, residential electricity prices are higher by an average of 3% every year. This is why you can save a good deal of money by going solar. Government incentives are making it easier to transition to renewable energy such as solar energy.

The global population is expected to reach nearly 10 billion by 2050, and 70 per cent more food must be produced to feed everyone. More precision agriculture methods that use digitalisation to increase production must be developed and adopted in order to meet the growth in demand. Norwegian companies are making important contributions towards this.

Solar panels must rotate as well as tip to face the sun at a 90° angle like huge, mechanised sunflowers. Sun-tracking solar panels are what enabled the record output in Piteå last March. Second: A sun-tracking solar panel needs to be a certain size to be cost-effective and requires the best and most costly silicon cells.
