

According to the U.S. Department of Energy, an ENERGY STAR computer uses 70% less electric energy than computers without this designation. If left inactive, ENERGY STAR computers enter a low-power mode. Spending a large portion of time in low-power mode saves energy and helps equipment run cooler and last longer.

Phantom energy Banish energy phantoms from your home. Many household electronics, devices and appliances with programmable features, clocks and timers draw power all day, every day, when they're plugged in but are turned off. This is known as standby power. Some of the more notorious energy phantoms that draw the largest amounts of standby power

Phantom energy refers to power used by electronic devices even when turned off. Many modern appliances create this issue because they use energy when off to stay in quick-start mode or operate a clock, including the microwave, televisions, cable boxes, audio systems, computers, clock radios and even phone chargers.. The simple solution is to turn off or unplug ...
