

Eric Hsieh, Deputy Assistant Secretary for OE's Energy Storage Division, and his dog, Mesa, enjoy a hike. (Photo courtesy of Eric Hsieh) The GSL building dedication is taking place August 13, 2024, and celebrates the commitment of the DOE's Office of Science, OE, the state of Washington, and Battelle to advance the next generation of breakthroughs in energy ...

Featuring panel discussions hosted by PNNL leaders with energy storage subject matter experts from industry and other agencies. ... Image by Melanie Hess-Robinson | Pacific Northwest National Laboratory. Share: Share on Facebook Share on X (formerly Twitter) Share on LinkedIn Email To: Monday, October 30 | 9:00 a.m. - 10:00 a.m. (PT) (Noon - 1: ...

The Energy Storage researchers at PNNL have turbocharged their materials discovery research with the addition of the Automated Robotics for Energy Storage (ARES) lab. Anchored by two AI-guided High-Throughput Experimentation (HTE) platforms, capable of handling both aqueous and non-aqueous electrolyte studies, the ARES lab offers automated ...

With more than three decades of experience in building energy research, PNNL is central to the nation's efforts to improve the energy efficiency of homes and buildings while making them more comfortable. Our research teams have delivered energy savings via building energy codes, by supporting dramatic acceleration of highly efficient solid-state lighting products, and by ...

Examples of PNNL energy-storage technologies include a variety of apparatuses and methods for redox flow, lithium-ion, sodium-ion, and lithium-metal batteries. With our patented innovations, PNNL is knocking down barriers to superior performance and cost prohibitions. Browse our intellectual property to learn more.

Among the candidates for higher gravimetric energy storage, the Li-S battery is considered quite promising, owing to its theoretical specific energy density (2600 Wh/kg) and specific capacity (1675 mAh/g) and significantly lower cost as compared to state-of-art lithium-ion batteries.<sup>2-4</sup> However, despite these attractive attributes ...

The Grid Storage Launchpad (GSL) is a \$75 million national grid energy storage R& D facility that will accelerate development of next-generation grid energy storage technologies that are safer, more cost effective, and more durable.

The Energy Storage Participation Algorithm Competition (ESPA-Comp) aims to assess the performance of participants' battery storage offer algorithms on their ability to maximize the value of battery storage resources under three different market designs: two-settlement, multi-settlement, and rolling horizon forward markets.

Modeling experts at Pacific Northwest National Laboratory (PNNL) offer an assortment of grid modeling and simulation tools and capabilities to meet the demands of a rapidly changing energy industry. These offerings help large building owners and energy suppliers confront such forces as global warming, potential power system disruptions ...

Abstract: Electrolyte is very critical to the performance of the high-voltage lithium (Li) metal battery (LMB), which is one of the most attractive candidates for the next-generation high-density energy-storage systems. Electrolyte formulation and structure determine the physical properties of the electrolytes and their interfacial chemistries ...

With the increasing demand for devices of high-energy densities ( $>500 \text{ Wh kg}^{-1}$ ), new energy storage systems, such as lithium-oxygen (Li-O<sub>2</sub>) batteries and other emerging systems beyond the conventional LIB, have attracted worldwide interest for both transportation and grid energy storage applications in recent years. It is well known that ...

Secure Your Spot for the 8th Annual Energy Storage Safety & Reliability Forum! Join us as we delve into the latest advancements in energy storage safety and reliability, aligning with the DOE roadmap for the future at the 8th Annual Energy Storage Safety & Reliability Forum, taking place from May 14-16, 2024. Proudly sponsored by the DOE Office of Electricity's Energy Storage ...

A new facility called the Grid Storage Launchpad (GSL) is opening on the Pacific Northwest National Laboratory-Richland (PNNL) campus in 2024 and is funded by the Department of Energy's (DOE) Office of Electricity. GSL will help accelerate the development of future battery technology with increased reliability and lower cost.

A new research centre "uniquely equipped" to evaluate energy storage technologies has opened at Pacific Northwest National Laboratory (PNNL) in Washington, US. PNNL, one of the US Department of Energy's (DOE) 17 National Laboratories, welcomed dignitaries, including Washington Senator Maria Cantwell, to a dedication event last week at ...

In 2023 Pacific Northwest National Laboratory continues their Energy Storage @ PNNL webinar series, this time featuring panel discussions hosted by PNNL leaders with subject matter experts from industry and other agencies. This ...

Energy Storage Materials 34, 76-84 (January 2021). Abstract: Lithium (Li) metal batteries (LMBs) have been revitalized in recent years in response to the increasing demand for high energy density batteries. However, the instability of Li metal anode (LMA) is still a critical barrier that limits large scale applications of these batteries ...
