

Is Poland at the crossroads of its energy system?

Dear Reader, Poland stands at the crossroads of important decisions on its energy system. At this juncture, the Polish power mix is still dominated by hard coal and lignite. However, between 2020 and 2035, about 60 power plants constructed in the 1970s are expected to retire.

What is the installed capacity of Poland?

Installed capacity: 40.4 GW (2015) Peak demand: 25.1 GW (Jan 2015) Energy consumption: 161.4 TWh (2015) Central Statistical Office of Poland; World Energy Council; PSE; Supreme Audit Office

Can Poland create a broad energy storage industry?

The new rules create an opportunity for Poland to create a broad energy storage industry, PSME's president said, from the development of technologies and products to the creation of jobs. In the main power market auction in 2022, battery energy storage was contracted for the first time - 165 MW to be exact.

Does Poland have a power system?

A power system operates in every country of the world. Almost everywhere - in Poland as well - power systems are centrally controlled. Operation of the Polish Power System is the responsibility of the National Power Dispatch Centre, i.e. PSE dispatching service. How does the power system work?

When will Poland have a new energy strategy?

A new Polish energy strategy is expected by the end of 2018. Some particularly interesting statements in the public debate on this strategy are the announcement by Energy Minister, Krzysztof Tchorzewski, in September 2017, that the Ostrowiec coal-fired power plant would be the last big coal investment in Poland.

How important is PV energy in energy production in Poland?

The importance of energy from PV installations in energy production in Poland increased significantly. The share of PV energy in electric power from RES increased from 3% in 2019 to more than 23.3% in 2022 and 4.5% in the total generation structure (four years ago, it was only 0.4%).
