Paired with specific solar panels, this unique hybrid supports system oversizing by up to 150%, resulting in a 150% increase in energy yield. For instance, a 5KTL inverter can support a 7.5 kWp system, providing 5KW full power AC output for daytime energy consumption and 2.5KW power battery charge for nighttime energy use. This enables you to ...

Overview: The 1.5kW solar system was once the most popular system installed in Perth. This is because government rebates at the time would only cover up to a maximum of this size system. Since then, government rebates have increased and the cost of solar components have come down and now most people are opting for larger systems.

Perth sunlight hours range from 3 in June to 9 hours in December. So ideally a 5kW solar system would produce around 12.5kW per day in June, while increasing to approximately 32kW per day in December. Solar panel energy is created through the sunlight, while hot days can make the system less efficient and reduce the output of energy.
