3. INTRODUCTION It is possible that the world will face a global energy crisis due to a decline in the availability of cheap oil and recommendations to a decreasing dependency on fossil fuel. This has led to increasing interest in alternate power/fuel research such as fuel cell technology, hydrogen fuel, biodiesel, solar energy, geothermal energy, tidal energy and wind.

If you want to go completely off the grid, the cost of using a stand-alone wind turbine system will be much higher than a hybrid wind-solar system. A more economical approach is a 3:1 ratio. For example, a 3kw wind-solar hybrid system uses a 1kw wind turbine, a 2kw solar panel, and other accessories. In this way, the cost ratio will be reduced.
