Los sistemas solares se componen de un inversor, paneles solares y en determinadas aplicaciones, de un banco de baterías. Los paneles fotovoltaicos captan luz solar y la transforman en corriente eléctrica, siendo el inversor, el encargado de transformar la corriente continua en corriente alterna para abastecer las cargas de la vivienda.

Significant potential exists in the use of biomass, hydropower, geothermal, solar, wave and wind energy. In particular, Chile has one of the largest solar potentials in the world. With almost 356 days of clear skies, high solar radiation and low humidity, the Atacama Desert in northern Chile offers excellent conditions for generating solar energy.

Solar array mounted on a rooftop. A solar panel is a device that converts sunlight into electricity by using photovoltaic (PV) cells. PV cells are made of materials that produce excited electrons when exposed to light. The electrons flow through a circuit and produce direct current (DC) electricity, which can be used to power various devices or be stored in batteries.
