

Can solar power be transformative in South Sudan?

When stability is achieved, smaller-scale systems could become a major component of a vibrant domestic and export clean energy economy. Renewable energy, particularly solar power, has the potential to be transformative in South Sudan for several reasons.

Why is South Sudan facing a serious energy crisis?

South Sudan faces a serious energy crisis due to a number of factors, including devastating conflicts (e.g. 1955-1972, 1983-2005 & 2013-present) and reliance on the fossil fuel source. The country has the lowest energy consumption rate in Africa and the highest cost of producing energy (World Bank, 2016).

Should South Sudan let go of fossil fuels?

Given the population of South Sudan standing at approximately 12 million, majority of it being rural folks surviving on subsistence farming and animal husbandry, a case may be made that this country is in a better position to let go of fossil fuels in favor of hydro, wind and solar energy.

Why is energy infrastructure underdeveloped in South Sudan?

Partly due to the civil wars (e.g., 1955-1972, 1983-2005 & 2013-present), energy infrastructure remains very underdeveloped in South Sudan. Despite a peace agreement in 2015, which has been revitalized recently, conflict has impeded the country's effort in transitioning to renewable energy.

Is oil the right form of energy for South Sudan?

However, oil is not the right form of energy to meet South Sudan's rising energy demand due to (1) high costs (e.g. high costs of fuel and generator repair), (2) sporadic diesel fuel supply, (3) inefficiency and unsustainability and (4) detrimental health impacts on people and environment.

How can Sudan achieve energy self-sufficiency?

Encouraging solar and wind power in the country's energy portfolio could help Sudan achieve its goal of energy self-sufficiency. Egyptian policies such as nurturing and promoting renewable technologies and scientific research, feed-in tariffs, and tax exemptions could help Sudan achieve its objectives.

It aims to shed a light on the different energy potentials that South Sudan possesses and to subsequently analyze the conditions that constitute the challenges disrupting the country's energy ...
