

Who is SPIC solar?

SPIC Solar has been focusing on BC technology since 2017 and has been collaborating with ISC since 2019, adopting the proprietary Zebra IBC solar cell technology. It has now become one of the world's major suppliers of BC products, offering high-efficiency BC solar cells and modules for various scenarios.

Where is SPIC solar power located?

By the end of 2016, SPIC owned a solar power capacity of 7,118.4 MW, and has established large-scale new energy bases in Jiuquan, Gonghe, Golmud, Hami, Yancheng, etc. SPIC's solar power assets are located in 27 provinces and autonomous regions in China including Qinghai, Xinjiang, Hebei, Jiangsu, Gansu, etc. (overseas assets excluded).

Why should you choose SPIC solar?

SPIC Solar's BC products are widely favored in the market for their advantages such as high efficiency, excellent temperature coefficient, superior low light performance, lower hot-spot temperature, best power stability, extra power generation, proven reliability, and elegant appearance.

How much do solar panels cost in North Korea?

This has allowed many North Koreans to install small solar panels costing as little as \$15-\$50, bypassing the state electricity grid that routinely leaves them without reliable power for months. Larger solar installations have also sprung up at factories and government buildings over the past decade.

Did Xi Jinping visit SPIC solar power plant?

President Xi Jinping visited the PV cell plant of the Xining Branch of SPIC Solar Power during his inspection in Qinghai Province in 2016.

What makes SPIC a global company?

SPIC is committed to global businesses. It has presence in 46 countries and regions, including 37 countries along the Belt and Road, with businesses covering power project investment, EPC, power plant services, etc. Sustainability is the corner stone of our development strategy.

In August 2018, SPIC Solar cut over its first module production line in China, with mass production capacity of 200 MW N-IBC cells and modules at more than 23% efficiency. As a result, HuangHe ...

SPIC group is one of the biggest clean energy and PV plants holder in the world, based on huge operational data and over 13 years Experience in Photovoltaic R& D and production, SPIC Solar is more professional in this area. SPIC Solar launched PERC, N-TOPCon and N-IBC in past years and will focused more in IBC technology path.

area of 2,200 hectares and will have a combined generating capacity of 738MW.

There are many technologies today for manufacturing and structuring the silicon solar cell. IBC solar cell technology is perhaps one of the most complicated. The traditional silicon solar cell, also known as Al-BSF (Aluminum Back Surface Field), is composed of a two-sided silicon layer with a single P-N junction, doped with phosphorus and boron.

With 67.81 GW of PV power, SPIC continues leading the world in scale, while promoting new business models like hybrid hydro-wind-solar, hybrid fishery-solar, hybrid agriculture-solar, desertification control with PV power, etc. Owning and operating multiple onshore and offshore wind farm clusters totaling 48.41 GW, SPIC is the second largest ...

LONGi Building-integrated Photovoltaics(BIPV) solution, is a new building form with perfect combination of solar energy and buildings. Products include: LONGi ROOF, LONGi PARK, LONGi BRIGHT, LONGi eHome. Click to learn more about the detail and cases.
