

What is sunoyster technology?

SunOyster Systems developed a new highly efficient concentrated solar collector for the co-generation of power and heat. With the SunOyster Technology we combine the best of Concentrated Solar Power (CSP) and Concentrated Photovoltaics (CPV) and PV.

What is the sunoyster Solar System?

The SunOyster is a new concentrating solar technology which converts the energy of the sun into both electricity and heat (solar co-generation), reaching a total efficiency of up to 75 %. The SunOyster generates at least twice as much energy from a given surface area as modern photovoltaic (PV) modules.

Can the sunoyster be used for solar cooling?

In particular, the SunOyster can be used for solar cooling. With this "Tri-generation" from electricity over heat to cold the SunOyster can provide the complete energy demand - and this at lower costs than the electricity grid or fossil energies.

How does the sunoyster work?

The proprietary control system of the SunOyster tracks the sun automatically all day from East to West. It allows online monitoring of the SunOyster, so that the customer can admire the energy generation via their mobile phone. In relation to a horizontal roof or ground surface the SunOyster generates at least twice as much energy as photovoltaics.

How much energy does a sunoyster generate?

16 m<sup>2</sup> mirror surface = 16 HP. The space required for tracking can still be used for additional 12 photovoltaic modules. So the SunOyster generates at least twice as much the total energy as conventional photovoltaics from the same area. Calculation example: roof of 40 m x 20 m in southern Spain.

What is the difference between sunoyster 8 & pvmover 18?

SunOyster 8 Smaller, lighter, stylish. Pitched roof installation possible. Available from mid 2023. SunOyster 8 screen The back of the SunOyster 8 can serve as an all-around swiveling projection surface. Pvmover 18 with 3.6 kWp - pure electricity generation, maximum efficiency through all-day (bi-axial) tracking.
