

How much energy does Slovenia produce?

Slovenia generated 68.8% of its electricity with zero carbon or carbon neutral sources in 2019, dominated by nuclear power and hydroelectricity. Fossil fuels oil, coal, and natural gas contributed 61% of the total energy supply of Slovenia in 2019.

Where is wind energy found in Slovenia?

A northwest to southeast band of higher potential wind energy is found across far southwest Slovenia, roughly between Gorizia, Italy and Rijeka, Croatia. Unlike the Atlantic Ocean and North Sea offshore areas of western and northern Europe, the offshore wind resources for Slovenia in the Adriatic Sea are not that much greater than onshore.

Does Slovenia have solar power?

Per analysis published by the World Bank which considers natural features of a location such as altitude, humidity, cloud cover, and topography, Slovenia's solar PV potential is relatively low compared to global resources, but is comparable to that of other central and eastern European countries which lie north of the Alps.

What natural resources does Slovenia have?

With abundant precipitation and numerous mountains, including the Julian Alps across the north of the country, Slovenia has significant hydropower natural resources. The single 696 MW nuclear reactor at the Krško Nuclear Power Plant near Krško in the eastern part of the country has been operational since October 1981.

Swiss manufacturing company GeoSIG Ltd was founded in 1992 with a vision of offering precision seismic and vibration monitoring and measuring solutions that would be reliable and long-lasting at more attainable prices.
