

Does the Cook Islands have electricity?

The Cook Islands has a financially healthy electricity sector with technical and commercial challenges requiring on-going investment. With the exception of Pukapuka, Nassau and Suvarrow, the Cook Islands has some form of electricity network. Power supply on Rarotonga is the responsibility of the government-owned utility Te Aponga Uira ("TAU").

How will electricity tariffs be reviewed in the Cook Islands?

Electricity tariffs will be reviewed so that they, as a minimum, ensure on-going operational viability and account for disadvantaged sections of communities. The Cook Islands Government will review the institutional arrangements to best achieve the 50/15 - 100/20 renewable electricity policy goals for the electricity sector.

Why is pricing important in the Cook Islands?

Pricing is a key tool for influencing consumer behaviour. An appropriate price needs to be set that encourages energy efficient behaviour and reduces the costs to the Government, whilst also achieving its vision of reducing the costs of living and business for residents and attracting Cook Islands people to live and invest in their homeland.

What changes will the Cook Islands make?

The changes will include management of power utilities, environmentally friendly and cost effective renewable electricity sources, and energy efficient strategies. The Cook Islands will be careful in its selection of renewable electricity options and will not entertain unproven or non-commercial technologies.

Who is tesvolt & how will it work?

The park will be operated jointly by the local energy supplier EWR AG, the PV and storage project developer W POWER, and the construction project developer TIMBRA. TESVOLT is supporting the project development, supplying and installing the large-scale storage system, and will take over service and maintenance for the storage power plant.

What sectors rely on imported energy in the Cook Islands?

There are three main sectors dependent on imported energy in the Cook Islands; these include transport, electricity and aviation. Of the total number of imported fuels into the country, 43% is used by transport; 30% by aviation and 27% by electricity.
