

The biggest challenge in renewable hydrogen today is high production costs. Renewable hydrogen needs to be deployed at scale, to improve commercial viability and reduce costs. And we see a pathway to scale, by supporting our customers to lead their industries in integrating renewable hydrogen into their operations.

Luxembourg-based technology services company Solutions 30 SE on Monday unveiled its latest investment in the solar power market, namely Xperal, a Dutch firm that offers design, engineering, procurement, commissioning and maintenance services for solar projects. The idea behind the transaction, the financial details of which were not disclosed, is to ...

The primary focus of Dutch energy policy is carbon reduction through a so-called Energy Transition. The Netherlands was one of the first EU countries to announce plans to eliminate natural gas from its energy mix altogether. The need to transition away from natural gas has gained further urgency in the Netherlands after the invasion of Ukraine.

Renewable energy company Ørsted has been named the world's most sustainable energy developer in Corporate Knights' 2024 Global 100 index. To triple renewable energy capacity by 2030, we need to unlock more space at land and sea with support from governments and societies - a sustainable approach must be at the core of that journey, SVP ...

Electrification is one of main options to decarbonise the Dutch energy system: its contribution to total primary energy supply increases from 19% today to 41-71% in 2050, depending on the scenario. By then electricity production will come almost completely from renewable energy sources, particularly wind turbines and solar panels.

RES, the world's largest independent renewables company, has been awarded the asset management contract for the landmark Larks Green project, the UK's first co-located solar and battery energy storage system connected to the ...

The Dutch government aims for 16% of all energy used in the Netherlands to be sustainable by 2023. The Integrated National Energy and Climate Plan for the Netherlands for 2021-2030 sets the target for renewable energy in the electricity sector at 74.4% for 2030. Renewable energy targets for heating and cooling have not been mentioned.

The Dutch capital has set ambitious renewable energy goals. By 2025, the city aims for 75% of its energy mix to come from renewable sources. Looking further ahead, Amsterdam plans to become a fully circular city by 2050, achieving zero waste and relying entirely on renewable energy.

Pan-European electric vehicle (EV) charge point operator Allego NV ( NYSE:ALLG ) has entered into two new power purchase agreements (PPAs) to source renewable electricity from Energy Solutions Group, which produces green energy in the Benelux region.

Renewable energy company Ørsted has been named the world's most sustainable energy developer in Corporate Knights' 2024 Global 100 index. To triple renewable energy capacity by 2030, we need to unlock more ...

At present, most renewable energy is derived from biomass. The Dutch electricity system is dominated by fossil fuel capacity, mainly natural gas and coal, which accounts for approximately 31.25 GW. Renewable energy comes mainly from biofuels, waste, and wind.

With 60% of the Netherlands below sea level and global temperatures at 1.7°C warmer than pre-industrial times, the climate crisis poses a substantial, urgent challenge here and abroad. The Amsterdam Area's ...

The uptick in renewable energy adoption has also prompted the need for energy storage to help stabilise the power grid during moments of excess energy generated by these cleaner alternatives. To achieve its renewable energy targets, reports in 2021 indicate that the Netherlands will need to install between 29 and 54 gigawatts (GW) of energy ...

Alliander is an energy utility company that distributes gas and electricity in the Netherlands, serving approximately 3.5 million customers. With more than half of Dutch energy now coming from renewable sources and increasing customer demand (with waiting lists up to 10 years), ensuring reliable energy supply and grid stability is essential.

Working together for a sustainable Netherlands with a carbon-neutral and circular economy by 2050. This means preventing harmful greenhouse gas emissions and maximising using and re-using (raw) materials. We help you with advice, ...

Read more about Indonesia-the Netherlands Renewable Energy and Climate Summit 2023. Life Science & Health Indonesia and the Netherlands work together to discover solutions relating to various health challenges. The Embassy facilitates cooperation between public and private sectors and academic institutions. The Embassy supports a program called ...
